How the best perform

COURSE DESCRIPTION

This fast-paced, interactive, and hands-on course provides you with the most current science behind biofilm management and gives you the opportunity to learn about some of the latest technologies to help you win the battle against subgingival biofilm.

Discussion will focus on:

- Utilization of air polishing and piezoelectric scaling equipment
- Application of supra and subgingival air polishing techniques
- Characteristics and application for various air polishing powders
- Implementation of air polishing therapy into your treatment protocol

Participants will leave with a sense of assurance and confidence in their approach to subgingival biofilm maintenance.

Course Objectives:

Course participants will be able to:

1. Understand the basics of biofilm and it's management
2. Connect the role of air polishing and piezoelectric scaling to successful biofilm management
3. Differentiate between supragingival and subgingival air polishing technology
4. Provide greater comfort to their patients during clinical procedures
5. Identify steps to integrate air polishing into clinical protocols
6. Understand the different uses of air polishing within the dental practice
7. Learn how air flow technology is safe, effective and efficient
8. Discover the "return on investment" potential for the practice
